Memo No. 4S-1/1340 (9)  
Dated, 25th July, 2019

From: Superintending Engineer,  
Metropolitan Drainage Circle, Irrigation & Waterways Directorate & Member-cum-Convener, Departmental Unified Schedule of Rates Revision Committee

To: 1. Chief Engineer (South)  
Irrigation & Waterways Directorate  
2. Chief Engineer (West)  
Irrigation & Waterways Directorate  
3. Chief Engineer (South West)  
Irrigation & Waterways Directorate  
4. Chief Engineer (North)  
Irrigation & Waterways Directorate  
5. Chief Engineer (Design & Research)  
Irrigation & Waterways Directorate  
6. Chief Engineer  
Teesta Barrage Project  
Irrigation & Waterways Directorate  
7. Director of Personnel & Ex-officio Chief Engineer  
Irrigation & Waterways Directorate  
8. Chief Engineer (North East)  
Irrigation & Waterways Directorate  
9. Project Director & Ex-officio Chief Engineer  
West Bengal Major Irrigation and Flood Management Project (WBMIFMP)  
Irrigation & Waterways Directorate

Sub: 5th Addenda & Corrigenda to the Unified Schedule of Rates of I & W Department (w.e.f 25.07.2019)

Sir,

Please find enclosed herewith the 5th Addenda & Corrigenda to the Unified Schedule of Rates of I & W Department (w.e.f 25.07.2019), duly approved by the Irrigation & Waterways Department, for information and forwarding to all Superintending Engineers.

Yours faithfully,

[Signature]

Superintending Engineer,  
Metropolitan Drainage Circle,  
Irrigation & Waterways Directorate  
& Member-cum-Convener, Departmental Unified Schedule of Rates Revision Committee

Enclo: As stated
Memo No. 4S-1/1340 (9)/1

Copy with the copy of enclosure submitted for favour of kind information to the Secretary to the Govt. of West Bengal, I & W Department, Chairman, Departmental Unified Schedule of Rates Revision Committee.

Dated, 25th July, 2019

Superintending Engineer,
Metropolitan Drainage Circle,
Irrigation & Waterways Directorate & Member-cum-Convener, Departmental Unified Schedule of Rates Revision Committee

Memo No. 4S-1/1340 (9)/1

Copy with copy of enclosure forwarded to the Executive Engineer, DVC Study Cell & e-Governance Cell Irrigation & Waterways Directorate

He is requested to upload this in the 'Unified Schedule of Rates' link of Departmental website www.wbiwd.gov.in

Dated, 25th July, 2019

Superintending Engineer,
Metropolitan Drainage Circle,
Irrigation & Waterways Directorate & Member-cum-Convener, Departmental Unified Schedule of Rates Revision Committee
A. **Corrigenda**

Note: Provisions of the latest Departmental Manual for Lining in Irrigation Canals are to be followed, wherever applicable.
3. 2.3.2.3 Specification of Cement concrete block pitching (Page B-10)

Existing provision below the heading is replaced by the following:

"Cement concrete blocks / lining units for (a) protection to the bank slope of irrigation canal / drainage channel to minimize seepage loss, ensure stability of slope and improve conveyance capacity, and (b) protection to the riverside slope of embankment to ensure stability and to prevent scouring or damage against wave action or high flow velocity, shall be designed as per codal provision / Departmental Manual and/or sound engineering practices, keeping in view the objective of end use and durability. Such block / lining should generally be placed over a layer of sand cushion or properly designed..."
conventional or geotextile filters, to avoid possibility of failure against pore water pressure. Consideration of filter / sand cushion in case of lining in irrigation canals shall be as per Table-2 (Modified) of the Manual for Lining in Irrigation Canals (1st Amended), brought out in July 2019.

2.3.2.3.1 Precast cement concrete blocks / lining units, made in casting yards with trowel finished top surface (without adding any additional cement sand mortar for plastering), followed by curing are to be laid in position over the sand cushion / filter bed, and levelled with cold (paper) joint between adjacent panels having gap varying from 0 to 5mm as tolerance. Provisions of the lining Manual (1st Amended) shall be followed for irrigation canals.

2.3.2.3.2 Cast-in-situ cement concrete blocks / linings shall be laid, by casting in alternative panels, or otherwise, with shuttering on four sides and with a layer of thick polythene sheet at bottom (of thickness 100 μm), to prevent clogging of filter due to intrusion of cement slurry, during casting. Side shuttering may be removed within 3 to 5 hours after casting. Gap between the adjacent blocks should be at least 12mm, to be kept preferably using removable plywood side shutterings or thermocol boards. In case removable shutterings are used, the gaps are to be filled up and compacted by 5.6mm down coarse aggregate. Finishing the top surface by trowel (without adding any additional cement sand mortar for plastering), will be followed by curing. While finishing the top surface, care is to be taken to ensure that the gaps in between blocks are not filled up by mortar. In case of plan dimension of individual units of block / lining exceeding 4 sqm, or in case of excessive seepage observed particularly at the lower portion of the slope, causing sloughing or scouring of soil materials, 50mm dia PVC pipes, with 300mm embedment into the virgin ground and top flush with the finished surface of the block / lining may be inserted at the centre of each block / lining and the pipes may be filled up and packed by 22.4mm / 20mm down well graded coarse aggregates, to create additional device for dissipating pore water pressure, in addition to the gaps lying along four sides of such units. Rate of supply, fitting and fixing of such PVC pipes may be analyzed by the construction wing, using PWD (Sanitary & Plumbing) and PW (Roads) SoR. Provisions of the Lining Manual (1st Amended) shall be followed for irrigation canals.”
